### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Rolf Fasth on 12/22/08.

Claim 1 has been replaced with the following:

A method for the treatment of chips, comprising:

heating the chips with steam in a steam treatment inside a steam treatment vessel,

adding an acidic fluid to the chips disposed in the steam treatment vessel while the chips are being steamed in the steam treatment vessel in an amount that gives the chips at least a five-fold increase in an ionic concentration of hydrogen ions at an end of the steam treatment compared to steam treatment without adding the acidic fluid,

in the steam treatment vessel, heating the chips together with the acidic fluid by the steam for a period of 1-20 minutes,

the chips falling down through a chute connected to the steam treatment vessel,

adding an alkali impregnation fluid to the chute while the chips fall therethrough,

forming the chips to a slurry in the chute with the alkali impregnation fluid,

Art Unit: 1791

wherein said alkali impregnation fluid comprises a liquor with sulfides, conveying the slurry to a digester, and cooking the chips in the digester.

2. The following is an examiner's statement primary reasons for allowance: Acid treatments prior to cooking are known in the art. However, these acid treatments, such as that of Elmore, are for removing hemicellulose (for biofuels and/or production of high alpha cellulose pulps). In the instant invention acid is added to a steam treatment vessel while the chips are being steamed. The chips then contact an alkali liquor containing sulfides which generates  $H_2S$ .  $H_2S$  increases the yield of the digestion process.

Connections to steaming vessels or pre-steaming chip bins are known, however, these connections are used for sending knots to said vessels (knots from kraft cooking process are alkaline in nature).

At the time of the invention there was no teaching to move the acid location to the steaming vessel in which steaming is occurring and then have the chips drop into a chute connected to said treatment vessel where the chips combined with alkali/sulfide liquor to form a slurry and  $H_2S$ , said slurry being transported to a digester (typically by way of pumping or high pressure feeders). Examiner notes that a "chip chute" is also known in the art as a "chip tube".

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 1791

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 5,672,245 discloses that it is known in the art to have pipe connections for sending knots to the pre-steaming, steaming vessel, or the top of the chip tube.

US 3,393,121 discloses cooking in alkali caustic (without sulfides), partially cooked acid sulfite wood.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ANTHONY J. CALANDRA whose telephone number is (571) 270-5124. The examiner can normally be reached on Monday through Thursday, 7:30 AM-5:00 PM.
